AVEVA™ E3D

Easy Deployment Build

The first part of the delivery of EMC4.0™ is the E3D Easy Deployment Build. The EDB is a self-contained environment built around the latest E3D release and will be updated inline with future releases from AVEVA™.

EDB is a pre-configured out of the box solution, no build or setup required, reducing start up costs and schedule impact.
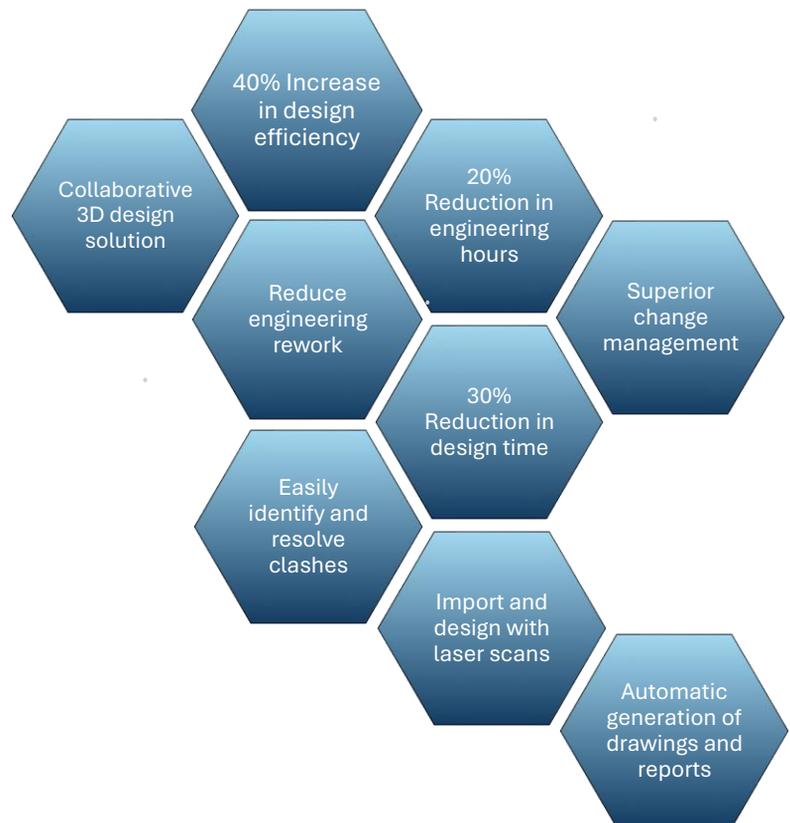

What is EMC4.0™?

EMC4.0™ is a roadmap for digital project execution and delivery, enhancing the digital asset of Conceptual Studies, Pre Project, Feed, Detailed Engineering and operations.

Supporting the full AVEVA™ Engineering suite embracing EPC4.0 and ENG4.0 to create EMC4.0™.

What's included?

- Enhanced Piping and Steelwork catalogues

- Pre-configured multi-discipline Supports module and Catalogue (Previously MDS) to allow for efficient Support design.

- Enhanced fabrication ISO's

- Custom forms and tools to improve multi-discipline 3D modelling and drawing production

- Configured Reporting

- Configured multi discipline Status and Revision Control to suit all EMCs clients discipline workflow methodologies.

Collaborative 3D design solution

40% Increase in design efficiency

20% Reduction in engineering hours

Reduce engineering rework

Superior change management

30% Reduction in design time

Easily identify and resolve clashes

Import and design with laser scans
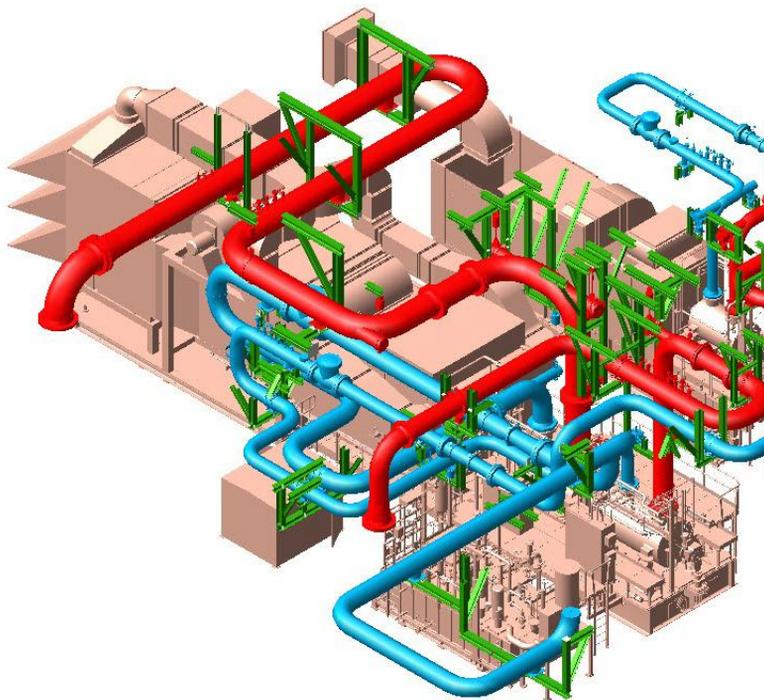

Automatic generation of drawings and reports

Service Support Contracts

EMC delivers expert, ad-hoc support across the full spectrum of engineering data—from 1D data and 2D intelligent deliverables to 3D models and Engineering Data Management (EDM) tools—all aligned with our integrated EMC4.0™ roadmap.

We specialise in optimising E3D engineering systems through tailored service contracts designed to enhance functionality, drive innovation, and support long-term development. Our approach enables efficient, standardised digital project execution that meets the evolving needs of modern engineering environments.

Backed by extensive professional experience, our team excels at identifying and resolving complex technical challenges within E3D. We are committed to improving system performance and reliability, ensuring your operations run seamlessly and are fully aligned with your unique requirements.

Capabilities Snapshot

- Experts in E3D system administration, database management, project setup, and maintenance to ensure seamless operations and data integrity.

- Custom application development and enhancements to maximize system functionality and eliminate limitations.

- Dedicated programmers and developers to expand, optimize, and future-proof your E3D environment.

- Catalog and specification management using ERM and Paragon, tailored to meet your standards.

- Expert troubleshooting and optimisation to ensure seamless E3D system performance.

- Comprehensive training programs, prioritising cloud-first deployment, with on-premise options available.

- Training for all skill levels, covering setup, best practices, and advanced workflows.

- Hands-on, customised training to enhance adoption and maximize productivity.

Ready to optimise your engineering systems?
